

Competitiveness and growth of economies depend, among other factors, on R&D investments and on the existence of a business structure capable of transforming innovation efforts into frontline outcomes that allow for a global advantage in innovation, both at the country and the firm levels. Which R&D strategies favour a better positioning in the global economy? Where and how to conduct private and public R&D investments? Which are the most relevant factors to face competition in international markets?

The V KIIS Workshop "Knowledge, Innovation, and Internationalization Strategies" is devoted to the analysis of the above questions. Related public policy issues will also be discussed. In particular, the aim of this Workshop is to provide a forum where researchers present and discuss high-quality research and benefit from interaction and exchange of ideas.

We acknowledge funding from PROMETEU/2019/095.
